

Bounded verified outcomes

Only repairs with repair evidence and an accepted independent journey retest are included.

INCLUSION RULE

Verified records only

Awaiting-verification, rejected, rework and missing-outcome records do not contribute to the measures below.
1 qualifying record

MEASURED CHANGE

What the bounded retests show

Each measure is calculated from the same qualifying evidence chain.

VERIFIED REPAIRS 1 Accepted for defined journeys and recorded conditions. Illustrative demo data	SUCCESSFUL JOURNEY TESTS 1 One bounded successful retest per included repair. Illustrative demo data	BEFORE-REPAIR JOURNEY SUCCESS 0% Share of accepted verifications with successful before-repair journey. Illustrative demo data
AFTER-REPAIR JOURNEY SUCCESS 100% Share of accepted verifications with successful after-repair journey. Illustrative demo data	AVERAGE TIME SAVED 5 min Average journey completion time reduction across accepted verifications. Illustrative demo data	DAYS TO VERIFICATION 2 days Average time from barrier observation to accepted verification. Illustrative demo data
PILOT SPEND ₹17,500 Estimated repair costs; meaningful only for this fictional case. Illustrative demo data		

SOURCE LEDGER

Traceable outcomes

Every reported outcome resolves back through the barrier, repair instruction, evidence, independent verification and recorded transition.

01 VERIFIED REPAIR FOR THIS JOURNEY AND TEST CONDITIONS Approach landing requires designated review Dry daylight conditions; main gate to admissions; step-free mobility journey.	Barrier	audit-obstruction-2026
	Work order	work-order-primary
	Repair evidence	evidence-repair-after
	Verification	verification-1
	Timeline event	event-accept-1

Illustrative demo data. A bounded retest reports one defined journey, access requirement and set of test conditions. It is not universal usability, professional certification or a determination of legal compliance.
